

Global Control S Retrofit Package

Upgrade your Navigator Control to the NEW Global Control S

Messer is pleased to announce a retrofit package for our customers with the Navigator control. This relatively inexpensive upgrade replaces an aging CNC control with our new **Global Control S**. As with most machine tools, it is not unusual for the iron to out live the CNC control in terms of operation and repair parts availability. While most Navigator controls will continue to operate well into the future, some customers could experience costly downtime as we deal with an ever increasing problem of sourcing replacement parts. Now is a good time to upgrade to the latest technology and prevent potential problems.

Many of the Navigator features are also included in the **Global Control S** including standard shapes, on-board nesting, graphical display of part or nest, multitasking, forward and backup on path, consumable tracking, etc. You will also benefit from some new features including...

On-board database of all cutting parameters

- Simplifies the operation of the machine by retaining cut speeds, kerf values, preheat times and other setups.
- Provides more accurate and better quality parts by using our Internal database parameters for ID's and External parameters for OD's.
- Reduces training time for new operators - even shows plasma/oxyfuel consumables on the screen!

Network connection/Communication

- Almost instant downloading of part programs increases productivity.
- Comes standard with the ability to connect to your network using a standard CAT-5e cable.
(Slow RS-232 communications using modems is not supported)
- Alternatively load programs via USB flash drive. *(Outdated floppy disk is not available.)*

Virtual Service (remote diagnostics)

- With the push of a button our team of experts are able to provide remote trouble-shooting, software upgrades and expert assistance when needed. *(Small annual maintenance fee required)*

Software upgrades

- Future software versions will further increase productivity while reducing costs by capturing data from the shop floor.

Considerations:

- Maximum six (6) stations possible.
- Drill, zinc powder marker and programmable torch spacing are not supported.
- There are many variations of CNC code recognized by the Navigator control. Contact our Applications Department to confirm compatibility with the Global Control S.

Estimated Price \$49,870 (Includes installation)

Actual price will depend on machine configuration.
Estimated install time 50-80 hours.
